

Claims:

1. A watch (1), in particular a wrist watch, comprising a housing (2) with a display (3) and an interface (4) capable of being connected to an integrated electronic circuit (5), characterised in that a receptacle (6) for the integrated electronic circuit (5) designed as an exchangeable chip with contacts (7) arranged thereon is provided within the housing (2), the receptacle (6) having elements (8) for contacting the contacts (7) of the integrated electronic circuit (5) in its inserted position, wherein the contacting elements (8) are connected to the interface (4) and to a device (9) for contactless transmission of data.

2. A watch according to claim 1, characterised in that the transmission device (9) is formed by an antenna.

3. A watch according to claim 1 or 2, characterised in that the receptacle (6) for the integrated electronic circuit (5) designed as an exchangeable chip is configured as a chip card, in particular as a SIM (subscriber identity module) card.

4. A watch according to any one of claims 1 to 3, characterised in that an opening is provided in the housing (2), via which the integrated electronic circuit (5) is insertable in the receptacle (6).

5. A watch according to claim 4, characterised in that the opening (10) is closable by a flap.

6. A watch according to any one of claims 1 to 5, characterised in that an element (11) for ejecting the inserted integrated electronic circuit (5) is arranged in the housing (2).

7. A watch according to claim 6, characterised in that the ejection element (11) is formed by a resiliently mounted pin.

8. A watch according to any one of claims 1 to 7, characterised in that a display (13) is provided which is connected with contacting elements (8) in the exchangeable chip receptacle (6).

1
2 9. A watch according to any one of claims 1 to 8, character-
3 ised in that an actuating element (14), e.g. a key, is provided
4 which is connected to contacting elements (8) in the exchange-
5 able chip receptacle (6).

6
7 10. A watch according to any one of claims 1 to 9, character-
8 ised in that the contacting elements (8) are formed by prefera-
9 bly resiliently mounted pins.

10
11 11. A watch according to any one of claims 1 to 10, character-
12 ised in that the contacting elements (8) are formed by spring
13 elements.

14
15 12. A watch according to any one of claims 1 to 11, character-
16 ised in that the contacting elements (8) connected to the inter-
17 face (4) are arranged in the exchangeable chip receptacle (6) on
18 the opposite side of the contacting elements (8) connected to
19 the transmission device (9).
